EDUCATION: Career Foundry Full Stack Development Course

Intensive online project-based training.

Web Development Projects include:

Movie-Geeks web application (Server Component and React Client-Side)

- Built a non-relational MongoDB database to store movie information (Titles, directors, genres and actors) and user information. Built Rest API using middleware modules and mongoose business logic. Tested API endpoints in Postman using JWT auth. Deployed with Vercel.
- Developed 2 frontend SPA's, one built with Parcel build tool, React library and Bootstrap for styling and responsiveness, one with Angular, Typescript and Angular Materials

Meet App

- A serverless Progressive Web App fetching upcoming events from a Google Calendar API.
- Built using Vite/React and TDD/BDD development using Jest-Cucumber, and end-to-end testing with puppeteer.
- Implemented OAuth2 authentication, AWS Lambda serverless functions for authorisation and Rechart charting library for data visualisation.
